

3-mm InGaAs Quadrant PIN Receiver with 4 TIAs

Features

- 3-mm InGaAs Quad PIN
- 30 MHz Bandwidth
- Spectral Response: 1050-1600nm (typical use: 1550-1570nm eye safe range)
- Low Noise Equivalent Power (NEP)
- Ambient Light Rejection
- Optional Automatic Gain Control (AGC)
- Optional Fast Overload Recovery
- Hermetically-Sealed Package

Description

CMC Electronics' 264-339826-VAR series is an InGaAs quadrant PIN receiver with 4 built-in trans-impedance amplifiers.

The 264-339826-001 is based on a 3-mm diameter quadrant InGaAs PIN with individual GaAsFET input TIAs for each quadrant, in a 46-lead square hermetic package. Each amplifier has an overload input protection circuit from high optical power exposure. A fast recovery time option is available for handling the overload. The receiver module has standard ambient light rejection circuit, eliminating unwanted background light signals. The optional externally controlled single or multi-stage AGC provides high dynamic range. Elective supply input filtering is available for supporting improved channel-channel isolation performance. The outputs can be AC or DC coupled to a 100 ohms' load, easing the next level design as required by end user.

Customization such as detector size, bandwidth, AGC levels, packaging is available, to fit your system design needs.

Applications

- Range Finding
- Spot Tracking
- Laser Alignment
- Guidance
- Position Sensor
- Free Space Optical Communication

Electro-Optical Characteristics at TA=25oC

Unless otherwise specified: V+=5V, V=-5V, Vpin=5V, RL=100Ω AC, λ = 1570 nm +/- 10 nm; values presented for VAR-001, without options (Externally AC coupled through 4.7uF)

Parameter/Condition	Min.	Typ.	Max.	Unit.
Responsivity (R) @ 1570 nm	40	60		kV/W
Noise Equivalent Power (NEP = E _n /R) 1570 nm	–	8	15	pW/√Hz
Output Impedance	–	10	–	Ω
Bandwidth, f _{-3dB}	25	30	–	MHz
Rise Time (10-90%)	–	12	15	ns
Fall Time (90-10%)	–	12	15	ns
Linear Output Voltage Swing (Pulse) ¹	1.5	2.5	4.0	V
Output Offset Voltage	-0.6	-0.25	0.1	V
Fast recovery for optical power input signal of 1mW, 15ns pulse width ⁽¹⁾ :				
V _{out} – V _{out_PrePulse} → 200 ns after pulse start	–	–	250	mV
V _{out} – V _{out_PrePulse} → 1.0 μs after pulse start	–	–	50	mV
Ambient light rejection	25	50	–	KHz
AGC ^(1, 2)				
Attenuation		-25		dB
Channel-to-channel				
Channel isolation	–	-30	–	dB
Channel isolation with supply input filtering	–	-40	–	dB
Response linearity (Quad-PIN)	–	–	10	%
Hybrid Supply current (all channels) ^(1, 3) :				
V+	70	170	250	mA
V-	40	120	170	mA

Note (1) Fast recovery, AGC and supply input filtering are optional features. Specifications are for reference only.

Note (2) AGC (active gain control) can be single or multi-stage. Discuss with CMC for the options that are most suitable to your needs.

Note (3) Supply input filtering improves cross-talk performance.
